- **ELICITATE** and **ANALYZE**
- **PREPARE** for elicitation
- **INVOLVED** in activities conducting elicitation
- **APPLY** elicitation in their organization

Why you Should Attend?

Requirement elicitation is a crucial activity in the requirement development process. It discovers the requirements of stakeholders. This means that it is where analyst identifies what the users or owners of the system to build want to see. The success or failure of this process is based on recognizing the relevant stakeholders and detecting and discovering their needs as well as the quality of requirements.

High-level requirements are defined during the concept phase of the project life cycle. These need to be detailed enough to complete a project brief. This, in turn, is used to make an investment decision. The level of detail captured during the concept phase, therefore, needs to be sufficient to justify proceeding to the definition phase.

From this course, delegates will be able to understand the fundamentals of business analysis, share how the core concepts fit together when performing business analysis deliverables, get to know the concepts of BABOK and PMBOK, learn the techniques requires for elicitation, draw out, explore and identify information relevant to elicitation, know the three types of elicitation, know the differences and similarities of requirements and design, elicit and analyse, prepare for elicitation, involved in activities conducting elicitation, and apply elicitation in their organization.

Who Should Attend?

The seminar is specifically designed for:

- ✓ Requirement Analysts
- ✓ Project Leaders and Managers
- ✓ Business Analysts
- ✓ Line Managers
