Why you Should Attend?

Most organizations suffer from bad demand forecasting which effects tremendously in optimizing profits. By incorporating structured tools to analyze data placing real time data, which will enable companies to formulate strategies and conduct the necessary steps in making decisions and this will enable companies to be competitive in the respected industries.

The proven strategy of being the market leader and eliminating competition is by creating a competitive edge which will be highly focused in this training. Applying the techniques and tools which will create an average reduction in the value of inventory management where in the long run will improve customer service.

In this workshop you will be exposed to lead through the steps necessary to develop a successful, comprehensive demand forecasting program to meet your organization's specific needs. Instruction and examples will be complemented by actual case studies and discussion involving participants' actual challenges.

After facing a challenging economic period, it is critical to have good estimates of what will happen in the future. With accurate and well forecasted information, organization will have a better idea to select best opportunities for success and how to initiate a plan with the resources at hand.
