Major Benefits of Attending

By end of this course, delegates will be able to:

- **BE PROVIDED WITH** tools and techniques to make better comparisons between supplier prices using a TCO model
- **STRENGTHEN** sourcing and contracting strategies through assessment of all the cost elements
- **SUPPORT** negotiating value-added partnership arrangements rather than focusing solely on price reduction like joint process improvements
- **UNDERSTAND** life cycle management including ownership, economic, service and depreciable life
- **ANALYSE** costs including acquisition costs, operating costs and change costs
- **SHOW** colleagues how to deploy a TCO model
- **DEMONSTRATE** how results from using the model can support a business case
- **UNDERSTAND** the link between strategic sourcing and TCO
- **PROMOTE** creative thinking, problem solving, and collaboration skills

Why you Should Attend?

If you are optimizing an area of spend, the tools in this course will be crucial. They document step-by-step the lifecycle of any goods or services purchased, analyse the costs throughout the lifecycles, identify cost elements and look mathematical methods for calculating total costs.

Fully exploit the opportunities of real cost savings through a spread sheet based model; you will be able to create a baseline for procurement costs against which you can measure future savings. This session will be valuable for those who have a limited understanding in calculating, measuring and managing TCO, and require practical, step-by-step in ensuring that TCO is effectively calculated.
