

ASSET INTEGRITY MANAGEMENT MASTERCLASS

Improve Your Understanding on Elements of Asset Integrity Management and Gain Insights on Uptime Model of Excellence in Maintenance Management

16th - 17th May 2019
The Ritz-Carlton, Kuala Lumpur, Malaysia

Major Benefits Of Attending:

By end of this course, delegates will be able to:

- **UNDERSTAND** the Essential Concepts of Asset Integrity Management
- **LEARN** the Elements of Good Asset Management
- **EXPLORE** the Opportunities of Improvement in Maintenance and Reliability Management
- **LEARN** how to Implement Successful Changes and get a Short Term Return on Investment in Asset Integrity Management
- **DISCOVER** the Possible Leads to Substantial Performance Improvements
- **UNDERSTAND** the Information Management and Governance in Asset Information Management

Why you Should Attend?

All industries should be aware that failure to maintain the integrity of their vessels, tanks, pipelines, oil and gas infrastructures and other assets has potential side effects on humans, environment and even on the financial aspect of the industry. The industry owner and operators of process plants should understand the importance of asset integrity in order for them to create and follow an effective Asset Integrity Management (AIM) system.

The importance of effective asset integrity management increases as the industry asset continues to age. When industries maintain the integrity of their assets, they will have smooth operations and few interruptions which means more output and more profits for their operation. In addition, when there is an effective asset integrity management, industries will have safer process plants with less accident, fewer leaks and less damage to the environment and eventually this will lead to enhanced reputation for their organization.

It is very important for industries to focus on Asset Integrity Management. By implementing an effective Asset Integrity Management, industries will significantly reduce serious damage to human lives and to the environment and industries will even have improved business performance.

In this workshop, delegates will learn about the asset management in terms of reliability centred management and asset information management. Participants have the opportunity to have group discussions on improvement opportunities in asset management.

Who Should Attend?

The seminar is specifically designed for Managers, Engineers, Inspectors and Technicians in the fields of:

- ✓ Integrity & Inspection
- ✓ Engineering
- ✓ Maintenance
- ✓ Process & Operations
- ✓ Health, Safety & Environmental
